New Provisional Committee Announced!

Review of DoD's Proposed Occupational
Exposure Limits for Lead

The National Academies of Sciences, Engineering, and Medicine have appointed a new committee to review the scientific and technical basis of the proposed occupational exposure limits for airborne lead developed by the Department of Defense. Specifically, the committee will evaluate whether the physiologically based pharmacokinetic model used to derive airborne concentrations from blood lead levels was appropriate. Consideration will be given to whether the appropriate model was chosen, whether modifications to the model were appropriately justified, and whether the assumptions in and inputs to the model

were reasonable.

The committee slate is provisional pending a 20-day public comment period (**ending March 3, 2019**) and final approval by the National Academies.

More information can be found on the BEST website and on the Academies' projects & activities system website.
